Manage with Key Performance indicators

There are many challenges facing Information Management System investments today:

- Streamlining information from multiple sources, transaction-based, and real-time
- Overcoming technological changes due to rapid IT innovation
- Synchronizing diverse and proprietary applications
- Achieving management buy-in with substantive ROI
- Having the right technical and financial resources at the right time
- Accommodating cultural differences among various users of information and their processes

Let us help you overcome such challenges, and develop information management system that brings results. Do not add complexity beyond business needs, and do not move data and information unnecessarily. Contact us today to discuss your needs: sales@OpteBiz.com

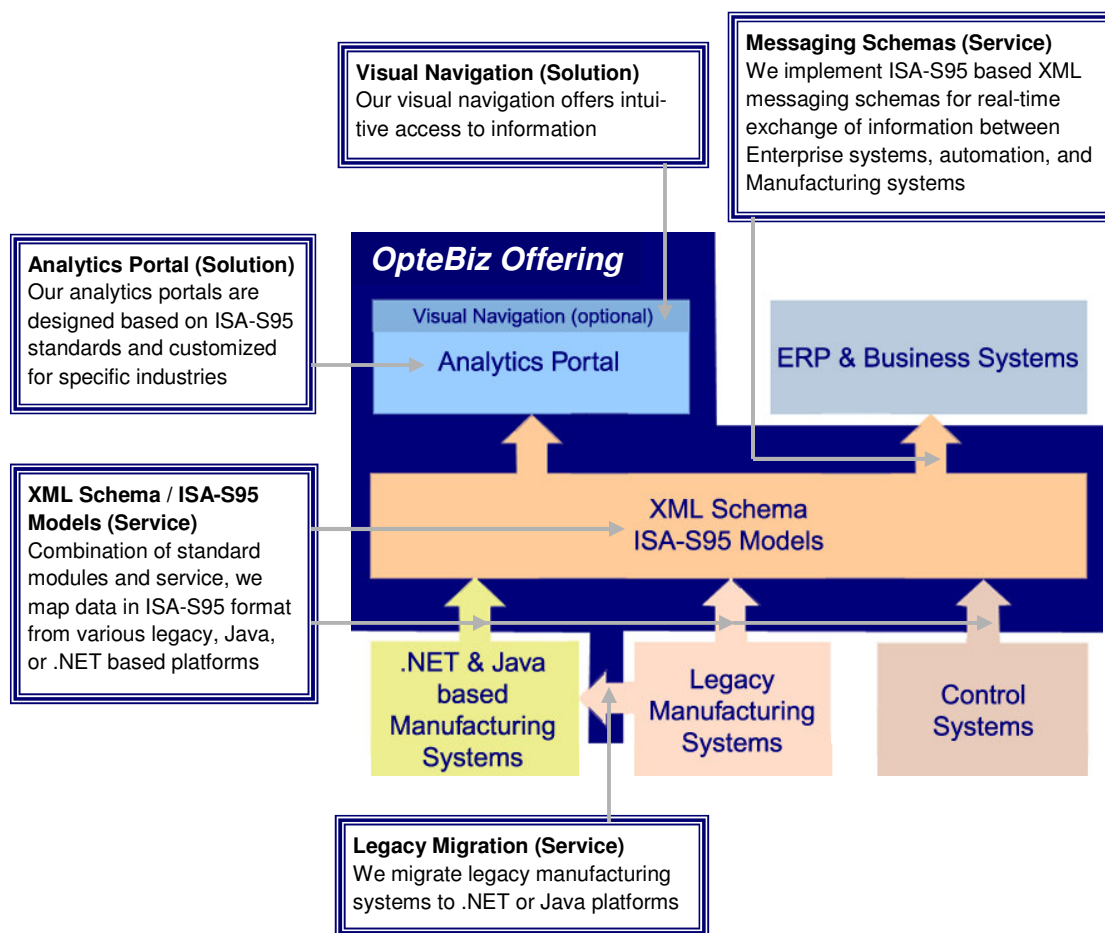

Our Solutions & Services

Expertise • Execution Speed • Cost Effectiveness • Dependability

Our Offering

Operational Intelligence Solutions

We transform your information to actionable intelligence/knowledge, and bring it to you for real-time decision making through our analytics portal, a single point access. A high value exists in aligning lower level operations objectives with key business goals.

Solutions with High Value

Our solutions offer the following:

Enact control based on Key Performance Indicator (KPI) values

- Enable visibility to Key Performance Indicators (KPIs)
- Ability to roll-up KPI information

Root Cause Analysis

Structured and unstructured Knowledge Retrieval

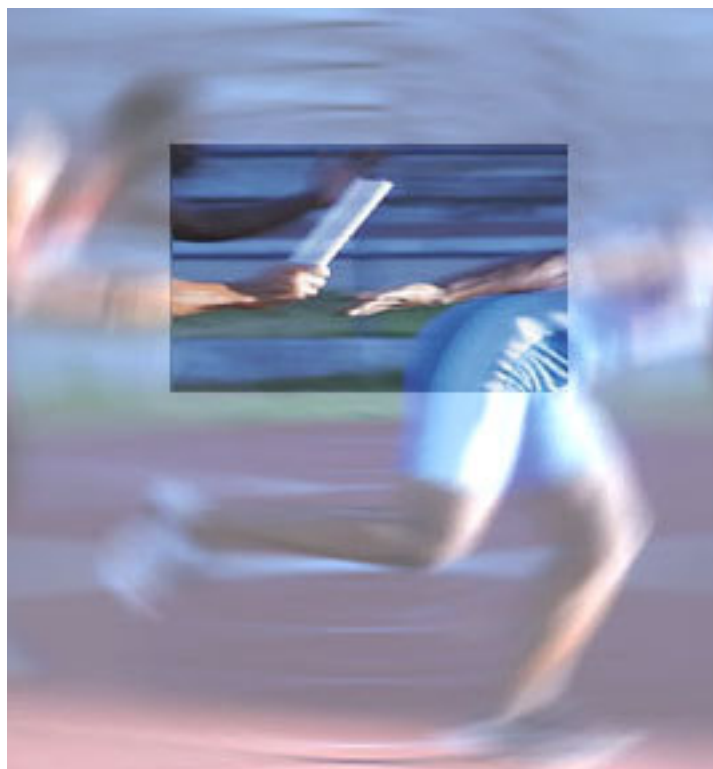

- Knowledge from Business Processes
- Knowledge from Operations Functions

Rule Your Business

Our Core Competence

- Expertise: Domain expertise in manufacturing operations combined with strong technology expertise in information technology and knowledge management
- Execution Speed: Modularized execution with disciplined project management that is nimble to meet client needs that can change rapidly
- Cost Effectiveness: Modularized and hybrid execution model that allows for a shortest distance to solutions and cost effective use of global resources
- Dependability: Long-term relationship based approach for continuous improvement
